

ABSTRACT OF THE DISCLOSURE

An anti-theft device is disclosed for use on a vehicle employing air-operated parking brakes. The device is
5 shaped for disposal about the parking brake release valves when engaged. The device includes a pair of mating halves formed for surrounding and enclosing the control valves while in an engaged position. A first of the halves includes a tongue having an opening therein
10 and a second of the halves includes a channel for receiving the tongue. A lock is provided with a locking pin being disposed in the second half wherein the locking pin engages the opening in said tongue in order to secure the first and second halves together. Also, an
15 adjustment mechanism is provided for tailoring the device to minor differences between the release valves from one vehicle to another.
